Kärcher pressure washer hose connector

You can use a pressure washer to clean nearly anything outside in a fraction of the time it would take you otherwise. However, before you start dreaming about your next cleaning project, learn more about how to choose a unit, what you need and how to use a pressure washer.

Types of Pressure WashersWhen you're shopping for pressure washers, you'll find two basic types: electric and gas. Electric pressure washers, which you power by plugging them into an outlet. That can limit where you use the pressure washer. Additionally, while they can be powerful, electric pressure washers are typically best for cleaning smaller items, including grills, patios and bicycles. People often like these types of pressure washers because they're quiet, lightweight, portable and low maintenance.

Gas pressure washers require that you buy gas or oil to power the machine. However, that also gives you the freedom to go just about anywhere with it. Although gas pressure washers are heavier than electric ones, they usually have wheels to help you maneuver them. Additionally, they require regular maintenance, but they're more powerful and last longer than electric models.

How Pressure Washers WorkNo matter whether you choose an electric or a gas-powered pressure washer, the machine works pretty much the same way. The motor or engine operates a pump. That pump pressurizes water from the hose up to 1,000 pounds or more before forcing it through the spray wand. The higher the pressure the washer puts out, the stronger its cleaning power. The pressure is measured in pounds per square inch (psi). While many of the smaller washers come with one adjustable nozzle that lets you switch from a single stream to a fan-shaped spray. Larger units may come with different nozzles, including some that rotate, create wider or narrower patterns and turbo-charge the stream.

What Not to Pressure WashPressure washers are effective in removing flaking paint, stuck-on grime, mold, algae, mud and more. Using a pressure washer on surfaces like patios, decks, driveways, masonry, siding and brick is perfectly safe. However, some materials can't hold up to the powerful pressure. Examples include: Asphalt roofs: Using a pressure washer on your asphalt roof destroys it by removing the granules. Antique items: Very old furnishings, old decking and antique buildings could all have dry rot or soft spots that your pressure washer will likely damage. Stained wood: Pressure washing stained wood surfaces will remove the stain from the wood, requiring you to re-stain it after it dries. Tips for Pressure WashingGetting started is a matter of powering up the machine and hooking it up to your garden hose and tightening all the connections to prevent air from getting into the lines. Tips for using your pressure washer include: Wash vertical surfaces like siding from the bottom up, then rinse from the top down Use the lowest pressure nozzle with the broadest spray pattern to avoid damaging the surface you're cleaning Avoid spraying into outlets, vents or air conditioning units Pressure Washer TroubleshootingAlways keep your pressure washer repair manual after buying one. Not only will it offer helpful tips for operating it safely, but it also will give you information like the model number, which you might need to get pressure washer repair parts. It also helps to keep pressure washer spare parts around for small fixes. For example, if you're having trouble starting it, you might need to replace the spark plug or clear out the fuel tank to remove debris before refueling. In many instances, you might not need parts. Instead, you might need to check things out. For example, if your pressure washer is leaking, check the O-rings and water seals, but it might be as simple as loose fittings, which are the most common cause of leaks. If you're having pressure problems, make sure your garden hose is the right size and is free of any kinks or leaks. MORE FROM QUESTIONSANSWERED.NET Hose connection systems for flexibility whatever the demand. Connection, coupling, decoupling and repairing: Kärcher offers the right connecting pieces for all available click systems and standard hose diameters. Regardless of the hose diameter - 1/2", 5/8" or 3/4": Kärcher's ultra-watertight hose connectors are always the perfect fit - guaranteed. The universal hose connectors also boast outstanding resilience and maximum tensile strength. The connectors are available with or without aqua stop. The premium universal hose connector also has an aluminium hose fastening and soft plastic recessed handles for even better handling. All Kärcher plug systems are of course compatible with the standard click systems on the market. You can return most new, unopened items fulfilled by Amazon AU within 30 days of receipt of delivery for a replacement or full refund of the price you paid for the item if you change your mind - see About Replacements and About Refunds. In some cases, the nature of the item means that it is non-returnable, for example, due to hygiene/health and personal care/wellness/consumable nature of the product. In some circumstances, these items may be eligible for a refund or a replacement (for example, if you receive the wrong item due to an Amazon AU error or if the item is faulty). Please Contact Us and see About Items That Can't Be Returned. New electronic items fulfilled by Amazon AU can be returned for change of mind, for a replacement or a full refund of the purchase cost of the item within 30 days of receipt of delivery. For information about returning faulty electronics please see Returning Faulty Items. Unless otherwise stated, original shipping fees for change of mind returns are not refunded. This change of mind return policy is in addition to, and does not affect your rights under the Australian Consumer Law including any rights you may have in respect of faulty items. To return faulty items see our Returning Faulty Items policy. For items ordered on Amazon.com.au from a seller that fulfils and ships its own inventory (also called a third party seller), any returns will be in accordance with the returns policy set by that seller (not the Amazon AU returns policies). Please see About Marketplace Returns & Refunds for details on Seller returns policies. Please see our Amazon Global Store Returns policy and Refunds policy for more information about returning Amazon Global Store items. More details: About Our Returns Policies Garden hose connectors — also known as hose fittings — are a key component of any lawn or garden watering system. But which connectors do you need for your hose? What about various nozzles? Here is a brief exploration of these questions. What Diameter Should You Choose? Before purchasing or attempting to use any garden hose fittings, you need to determine what diameter the thickness of your hose is. Common garden hose diameter sizes include 1/2-inch, 5/8-inch, and 3/4-inch, so you'll want to purchase connectors that fit the type of hose you use. Hoses with larger diameters can carry a larger volume of water at one time but offer lower water pressure. Hoses with smaller diameters carry less volume of water but have more pressure. Larger diameter hoses are often more difficult to reel up. Consider these factors when choosing the hose you want for a particular purpose. What Material Are Fittings Made From? You'll find hose fittings available in both plastic and metals, such as brass. Brass is usually more expensive but can last longer and stand up to more rigorous use. Plastic is light, inexpensive and possibly easier to use, but cracks more easily — especially if it is accidentally frozen. The material you use may depend on the intended application and how often it is used. What Are Y-connectors? What do you do when two people need to use the hose at the same time for two different jobs, but there's only one water spigot. In these situations, you can employ a Y-connector, also known as a splitter. This is a hose connector that diverts one source of water into two separate hoses, each with its own shutoff. One downside is that there will be less water pressure and volume available if both ends of the Y are used simultaneously. Sprayer Options For gardens, potted flowers and washing the car, a sprayer nozzle on the end of your garden hose can be a real help. Some nozzles are adjustable and can spray water in different patterns and at different speeds and volumes — from a light mist to a soaker setting to a strong jet suitable for cleaning debris off of your porch. Shutoff Valve Protection If you don't need the versatility of a sprayer but still need a way to stop the water at one end of your hose, consider a simple shutoff valve that allows the flow to either be on or off. Finally, make sure you use a rubber washer of the correct diameter with each new fitting. Otherwise, the new hose connector will leak for sure. It's easy to lose these rubber washers, so keep a box on hand during yard and garden season. MORE FROM QUESTIONSANSWERED.NET
